Dear Customer,

In response to your inquiry, following is PTCA's statement on the "Mercury-free" status of its products:

Mercury is a naturally occurring element that is found in materials and chemicals at trace levels. For this reason, PTCA defines "mercury-free" as not having mercury at greater than detection limits of 0.001 wgt. % for solids, and 0.001 mg/l for liquids.

PTCA's steel tubing products are not produced using mercury or any mercury compounds. In addition, the product does not come into contact with mercury or mercury bearing compounds during manufacturing, inspection, and testing, at more than trace levels as defined above.
